Abstract not available for EP1228610

Abstract of correspondent: **WO0133781**

The invention relates to a method for implementing a multimedia messaging service between a wireless terminal (MS) that communicates with a communication network (12, 15, 18) over a radio path and a server (20). The method comprising the steps of receiving and storing a multimedia message addressed to the wireless terminal at the server, the multimedia message comprising at least one multimedia component, and storing information on at least one property of the wireless terminal (MS) in the server. The method further comprises determining if there is any component of the multimedia message, which the wireless terminal can handle according to the stored information on at least one property of the wireless terminal. If there exists one or more such component(s), they are selected for transmission and transmitted to the wireless terminal.
